

Homemade Finger Paint Recipe

Ingredients

- 4 ½ cups of water
- 2 teaspoons salt
- 2 cups flour
- Food Coloring

Directions

1. Add 4 ½ cups of water and 2 teaspoons of salt to a pot.
2. Put the pot on the stove at medium heat.
3. Slowly add 2 cups of flour to the pot; whisk the flour in to ensure there are no lumps.
4. Once you start to feel the mixture thicken, turn the temperature to low.
5. Continue to whisk until you have the right consistency.
6. Spoon the paint into small containers (such as baby food jars, plastic bowls, a muffin tin, or an ice cube tray)
7. Add 2 drops of food coloring and stir well. Create 2-4 different colors.
8. Allow time for the fingerpaint to cool. Once it is cooled, the paint can be stored for later use.

*Note: This homemade paint will not dry the same way store-bought paint does. In addition, this homemade paint is safe for explorative hands (and mouths).
